

Data Sheet 29 (DS 029)

Length of Cycleways

What are we monitoring?

The length of local network cycleways, regional cycleways and the Great Blue Mountains Trail.

What is the trend?

Due to recent changes in measurement methods, no trend data is available.

Why is monitoring this trend important?

The provision of safe, accessible and well designed cycling infrastructure provides opportunities for people to cycle. This in turn supports a physically active community. People who are more physically active have lower rates of cardiovascular and related diseases, obesity and depression.

This measure can help track progress of the Council in implementing its adopted Blue Mountains Bike Plan 2020.

Length of Cycleways in the Blue Mountains

Year	2014/15
Local Network (km)	47.00
Great Blue Mountains Trail (km)	15.00
Regional On Road (km)	40.00
